Scan Report

April 18, 2018

Summary

This document reports on the results of an automatic security scan. All dates are displayed using the timezone "America/Belem", which is abbreviated "-03". The task was "Alvo Paraiso". The scan started at Wed Apr 18 10:53:13 2018 -03 and ended at Wed Apr 18 11:00:44 2018 -03. The report first summarises the results found. Then, for each host, the report describes every issue found. Please consider the advice given in each description, in order to rectify the issue.

Contents

1 Result Overview

Host	High	Medium	Low	Log	False Positive
200.239.72.19 host-200-239-19.ufpa.br	0	0	0	17	0
Total: 1	0	0	0	17	0

Vendor security updates are not trusted.
Overrides are on. When a result has an override, this report uses the threat of the override.
Notes are included in the report.
This report might not show details of all issues that were found.
It only lists hosts that produced issues.
Issues with the threat level "Debug" are not shown.
Issues with the threat level "False Positive" are not shown.

This report contains all 17 results selected by the filtering described above. Before filtering there were 26 results.

2 Results per Host

2.1 200.239.72.19

Host scan start Wed Apr 18 10:53:17 2018 -03
Host scan end Wed Apr 18 11:00:44 2018 -03

Service (Port)	Threat Level
general/HOST-T	Log
22/tcp	Log
21/tcp	Log
general/tcp	Log
80/tcp	Log
general/CPE-T	Log

2.1.2 Log 22/tcp

Log (CVSS: 0.0)
NVT: SSH Protocol Versions Supported

Summary
Identification of SSH protocol versions supported by the remote SSH Server. Also reads the corresponding fingerprints from the service.
The following versions are tried: 1.33, 1.5, 1.99 and 2.0

Vulnerability Detection Result

```
The remote SSH Server supports the following SSH Protocol Versions:
1.99
2.0
SSHv2 Fingerprint:
ecdsa-sha2-nistp256: 68:d0:25:f3:55:ce:a4:02:26:ee:b5:29:c5:36:06:ab

Log (CVSS: 0.0)
NVT: SSH Server type and version

Summary
This detects the SSH Server's type and version by connecting to the server and processing the buffer received.
This information gives potential attackers additional information about the system they are attacking. Versions and Types should be omitted where possible.

Vulnerability Detection Result

```
Remote SSH server version: SSH-2.0-OpenSSH_7.4p1 Debian-10+deb9u3
```

... continues on next page ...

... continued from previous page ...

```
Remote SSH supported authentication: password,publickey
Remote SSH banner: (not available)
CPE: cpe:/a:openbsd:openssh:7.4p1
Concluded from remote connection attempt with credentials:
  Login: VulnScan
  Password: VulnScan
```

2.1.4 Log general/tcp

Log (CVSS: 0.0)
NVT: OS Detection Consolidation and Reporting

Summary

This script consolidates the OS information detected by several NVTs and tries to find the best matching OS.

... continues on next page ...

... continued from previous page ...

Furthermore it reports all previously collected information leading to this best matching OS. It also reports possible additional information which might help to improve the OS detection.
If any of this information is wrong or could be improved please consider to report these to openvas-plugins@wald.intevation.org.

Vulnerability Detection Result

```
Best matching OS:
OS: Debian GNU/Linux 9
Version: 9
CPE: cpe:/o:debian:debian_linux:9
Found by NVT: 1.3.6.1.4.1.25623.1.0.105586 (SSH OS Identification)
Concluded from SSH banner on port 22/tcp: SSH-2.0-OpenSSH_7.4p1 Debian-10+deb9u3
Setting key "Host/runs_unixoide" based on this information
Other OS detections (in order of reliability):
OS: Linux/Unix
CPE: cpe:/o:linux:kernel
Found by NVT: 1.3.6.1.4.1.25623.1.0.105355 (FTP OS Identification)
Concluded from FTP banner on port 21/tcp: 220 (vsFTPd 3.0.3)
OS: Debian GNU/Linux
CPE: cpe:/o:debian:debian_linux
Found by NVT: 1.3.6.1.4.1.25623.1.0.111067 (HTTP OS Identification)
Concluded from HTTP Server banner on port 80/tcp: Server: Apache/2.4.25 (Debian)
OS: Debian GNU/Linux
CPE: cpe:/o:debian:debian_linux
Found by NVT: 1.3.6.1.4.1.25623.1.0.111067 (HTTP OS Identification)
Concluded from HTTP Server default page on port 80/tcp: <title>Apache2 Debian De
↪fault Page

Log (CVSS: 0.0)
NVT: Traceroute

Summary

A traceroute from the scanning server to the target system was conducted. This traceroute is provided primarily for informational value only. In the vast majority of cases, it does not represent a vulnerability. However, if the displayed traceroute contains any private addresses that should not have been publicly visible, then you have an issue you need to correct.

Vulnerability Detection Result

```
Here is the route from 10.15.10.20 to 200.239.72.19:
10.15.10.20
10.200.3.4
```

Log (CVSS: 0.0)
NVT: CGI Scanning Consolidation

Summary
The script consolidates various information for CGI scanning.
This information is based on the following scripts / settings:
- HTTP-Version Detection (OID: 1.3.6.1.4.1.25623.1.0.100034)
- No 404 check (OID: 1.3.6.1.4.1.25623.1.0.10386)
- Web mirroring / webmirror.nasl (OID: 1.3.6.1.4.1.25623.1.0.10662)

- The configured 'Enable CGI scanning', 'Enable generic web application scanning' and 'Add historic /scripts and /cgi-bin to directories for CGI scanning' within the 'Global variable settings' of the scan config in use
If you think any of these are wrong please report to openvas-plugins@wald.intevation.org

Vulnerability Detection Result

```
Generic web application scanning is disabled for this host via the "Enable gener
↪ic web application scanning" option within the "Global variable settings" of t
↪he scan config in use.
Requests to this service are done via HTTP/1.1.
This service seems to be able to host PHP scripts.
This service seems to be NOT able to host ASP scripts.
Historic /scripts and /cgi-bin are not added to the directories used for CGI sca
↪nning. You can enable this again with the "Add historic /scripts and /cgi-bin
↪to directories for CGI scanning" option within the "Global variable settings"
↪of the scan config in use.
The following directories were used for CGI scanning:
http://host-200-239-19.ufpa.br/
http://host-200-239-19.ufpa.br/cgi-bin
While this is not, in and of itself, a bug, you should manually inspect these di
↪rectories to ensure that they are in compliance with company security standard
↪s
The following directories were excluded from CGI scanning because of the "Regex
↪pattern to exclude directories from CGI scanning" setting of the NVT "Global v
↪ariable settings" (OID: 1.3.6.1.4.1.25623.1.0.12288):
http://host-200-239-19.ufpa.br/icons
```

Log Method

2.1.7 Log general/icmp

Log (CVSS: 0.0)
NVT: ICMP Timestamp Detection

Summary
The remote host responded to an ICMP timestamp request. The Timestamp Reply is an ICMP message which replies to a Timestamp message. It consists of the originating timestamp sent by the sender of the Timestamp as well as a receive timestamp and a transmit timestamp. This information could theoretically be used to exploit weak time-based random number generators in other services.

Vulnerability Detection Result

. . . continues on next page . . .

... continued from previous page ...

Vulnerability was detected according to the Vulnerability Detection Method.
